## Mobile Event Data Recorder

Forward facing camera with integrated GPS that records speed, time & location for post crash analysis and interfaces with Google Earth

**Great for any driver!**

SDHC 16GB

### Storage Capacity up to SDHC 16GB

With sufficient storage up to SDHC 16GB, X-Driven allows you to save much more recorded video files and data safely.

Mega Pixel

### 1.3 Mega Pixel Image Sensor

With clear and accurate resolution recording X-Driven can offer more clear and recognizable video images to help verify the causes of the actual accidents.

SD Card

### 1-2GB SD card packed with DRS1100

When the SD storage reaches full it overwrites the oldest saved file to save and store the new file.

GPS

### Upgraded GPS Module

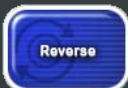

With embedded GPS module, X-Driven shows the exact location, speed and the map information.

Voice

### Audio Recording

Audio files can be stored along with other data, (Video Images, GPS and G-Sensor Information).

Reverse

### Reverse recording function

When the DRS 1100 is turned upside down the video images can be shown, saved and also stored normal, (not upside down).

X-Driven

### X-Driven - Easy to install viewer program

With Ubones own viewer program enabled X-Driven allows you to view the recorded video images doubling with the Map positioned GPS information to the exact location.

## Mobile Event Data Recorder

The greatest risk while driving is the sheer unpredictability of events on the road. X-Driven's original high resolution 1.3 megapixel color camera, Digital Video Recorder, GPS, and shock-sensor, the X-Driven EDR is as technologically sophisticated as it is practical. X-Driven offers to both commercial and private vehicle operators an effective risk reducing means to aid in the investigation process, decrease collateral damages associated with car accidents, encourage safe driving, monitor driving behaviors, and overall enhance the safety on the road.

X-Driven, an in-vehicle EDR (Event Data Recorder), makes constant recordings of video footages on a loop as the journey continues. A pre-determined amount of G-force will activate the camera recording and put the latest image to memory (10 seconds prior to contact). Files are recorded directly to a SD card (2GB included). These videos may later be viewed for surveillance purposes or evidence in an investigation. With our integrated GPS, X-Driven records the speed, time, and location for post-crash analysis, providing concrete evidence for clarifying responsibility. X-Driven also provides an easy user interface to extract the data from the unit and transfer to a computer. Our unique playback viewer software makes it effortless to view and save video files to your PC.

## Playback Viewing Software

## X-Driven in the Field

Who Uses X-Driven?	Benefits
<b>Taxi Company</b>	<ul style="list-style-type: none"> <li>- Ensure Safety of driver</li> <li>- Enhance visibility of vehicle</li> <li>- Crime prevention</li> </ul>
<b>Teen Drivers, Driving Schools</b>	<ul style="list-style-type: none"> <li>- Monitor driving routes, speed, and driving behavior</li> <li>- Encourage safe driving with camera presence</li> <li>- Decrease liabilities</li> </ul>
<b>Cargo/Rental Cars</b>	<ul style="list-style-type: none"> <li>- Ensure safety of drivers and vehicles</li> <li>- Tighten security at loading sites</li> </ul>
